Envision East Arapahoe

What Should We Measure?

The next step of the Envision East Arapahoe project is to develop scenarios showing different options for land uses, patterns, transportation connections and other ideas. Indicators are used to measure the scenarios and determine which options best meet the project goals and other community values. Indicators will be grouped according to Boulder's Sustainability Framework.

Please let us know what you think is important to measure. What is not on the list that should be?

Safe Community

Measures aspects of community safety that may be affected by future development.

- Safe Routes and Crossings
- Cost of Public Safety

Healthy and Socially Thriving Community

Measures healthy living and social connectedness, including:

- Mix of Uses
- Connected to City Destinations
- Close to Nature

Livable Community

Measures dimensions of living and working in the area.

- Housing Capacity / Number of Dwelling Units
- Affordable Housing
- Jobs Nearby

Accessible and Connected Community

Measures how easy it is to get around the area and connect to other parts of town and the region.

- Easy Walking and Bicycling
- Good Transit Access
- Fewer Car Trips
- Parking

Environmentally Sustainable Community

Measures how development patterns and design might affect the environment.

- Lower GHG Emissions
- More Parks and Open Space
- Avoiding Flood Zones and Wetlands

Economically Vital Community

Measures jobs and revenue, and how those compare with the expected costs of providing city services to new development.

- Jobs
- Cost of City Services
- Tax Revenue
