

# Green Is The New PiNK

Go easy on the fertilizer!

Phosphorous, Nitrogen and Potassium (P-N-K) from fertilizers pollute streams.

## IT HARMS STREAMS

Excess nutrients in streams, like phosphorus and nitrogen, increase algae growth, which can hurt fish and lead to dead zones.

## IT RUNS OFF

Just like rain and snowmelt, overwatering can wash nutrients off of yards and into storm drains, which lead directly to our creeks!

## IT ADDS UP

Up to **60%** of nitrogen that people put on their lawns through fertilizer ends up in our local creeks!

Printed on 100% recycled paper.
