Background

The Boulder Valley Employee Transportation Survey has been implemented nine previous times: in 1991, 1993, 1995, 1997, 1999, 2001, 2005, 2008 and 2011. A similar effort for Downtown Boulder employees was conducted in the fall of several of the same years. In 2005, it was decided that these efforts could be combined to achieve some cost savings for all the involved agencies. The University of Colorado was also interested in joining the effort, and a survey of faculty and staff were included beginning in 2005. In 2014, Boulder Valley School District and City of Boulder government employees were also surveyed.

Where questions were similar enough to allow direct comparison, results have been included in this report. (A separate report of results was produced for each surveyed group.) In addition, a few questions could be compared to information from the 2011 American Community Survey (conducted by the U.S. Census Bureau) about the journey to work.

The number of respondents from each surveyed entity or group is shown below. Across all the survey efforts, a total of 6,613 employees completed the survey. (The Downtown Boulder employees are counted twice in the table below – for Downtown Boulder, and also for Boulder Valley as a whole).
