

Previous mapping of Boulder Slough was approximate and did not delineate the Conveyance Zone.

The Conveyance Zone is a preservation zone for passing flood flows along the creek corridor without increasing flood depths, redirecting flood waters or adversely impacting land areas. The Conveyance Zone specifically includes the area of the floodplain which would be required for the passage (or conveyance) of the entire flood flow resulting from the encroachment (filling in or blocking out) of the 100-year floodplain from the edges until a maximum six-inch (0.5-foot) increase in flood water depths is created.

Legend

-  Proposed Boulder Slough Conveyance Zone
-  Revised Boulder Creek Conveyance Zone
-  Effective Boulder Creek Conveyance Zone
-  Buildings Added to the High Hazard Zone (10)
-  Buildings Remaining in the High Hazard Zone (0)
-  Buildings Removed from the High Hazard Zone (0)
-  Ditch
-  Creek
-  Intermittent Creek
