

Photographs of the
Valmont Butte Mill
Taken in September 2007

Looking northerly toward the main portion of the mill facility.

Top of the three tanks where the unprocessed ore is delivered to the mill.

Looking westerly toward the east elevation of the mill.

Looking southeasterly toward the mill. The Valmont Pioneer Cemetery can be seen beyond the gravel roads in the background.

Liquid separator tank.

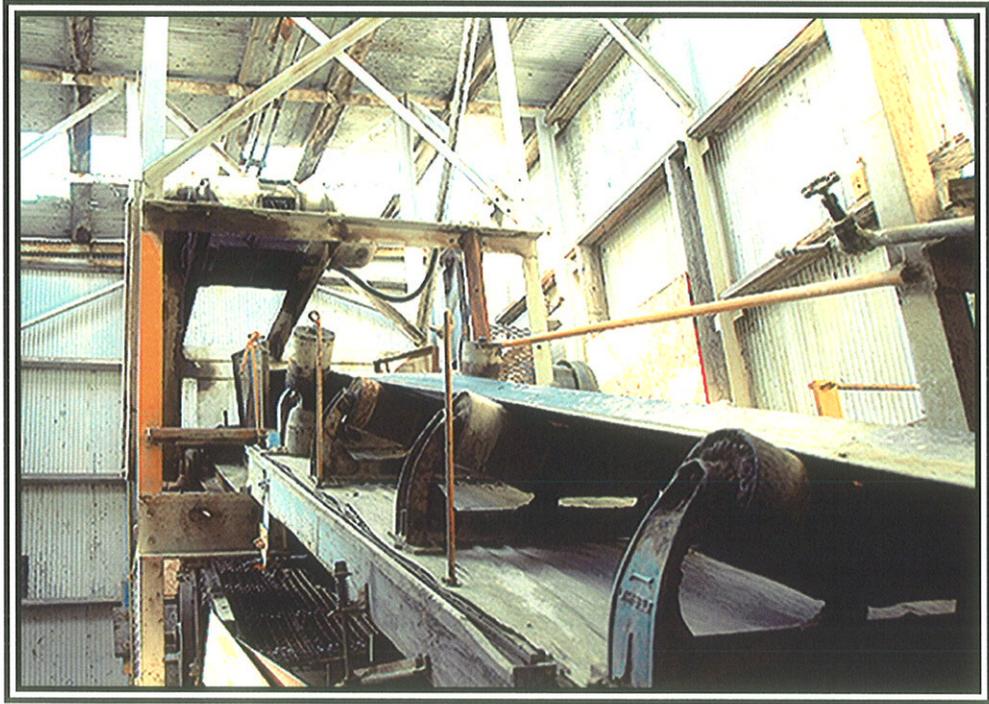

Electric utility building.

Storage buildings east of the mill, most of which will need to be razed.

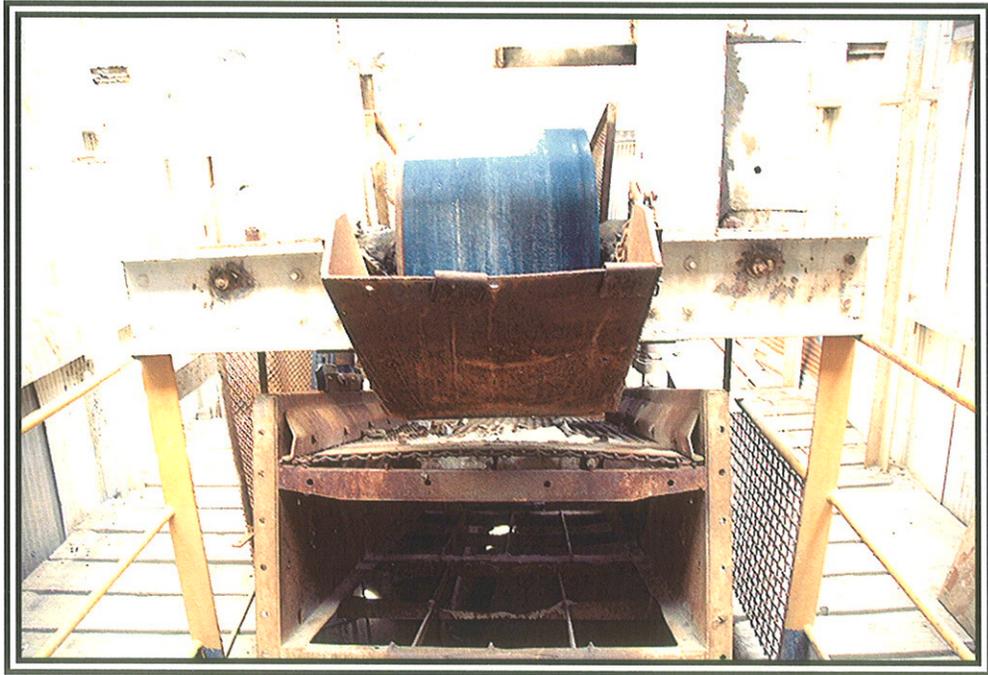

Chute where raw ore is dropped into the mill from the storage tanks to be processed.

Conveyor belt used to bring raw ore into the mill to be processed.

Another view of the conveyor.

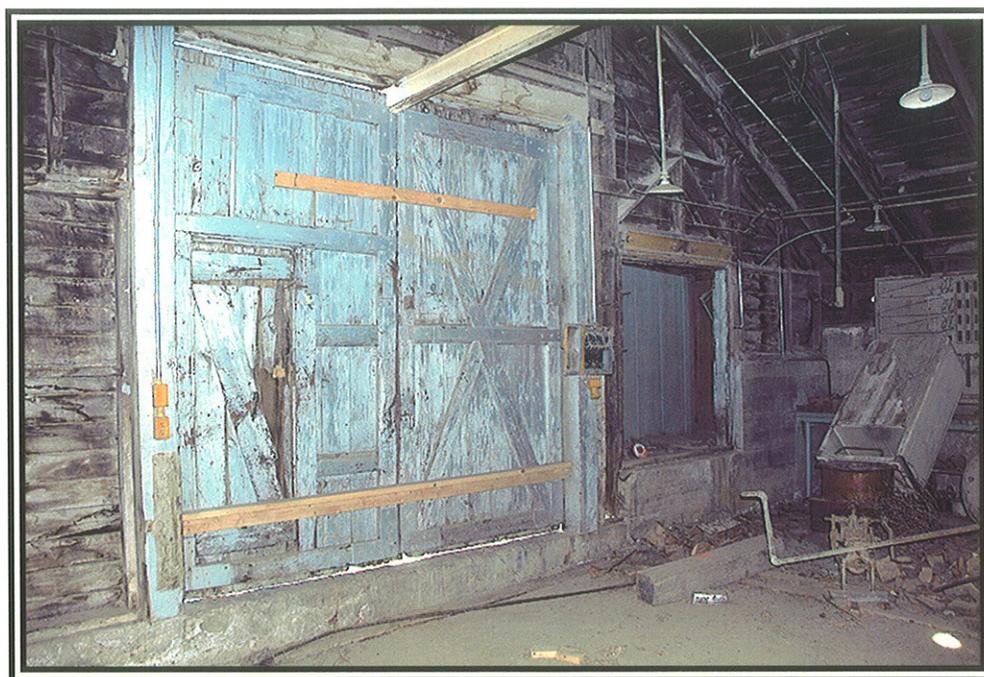

One of the sorting bins.

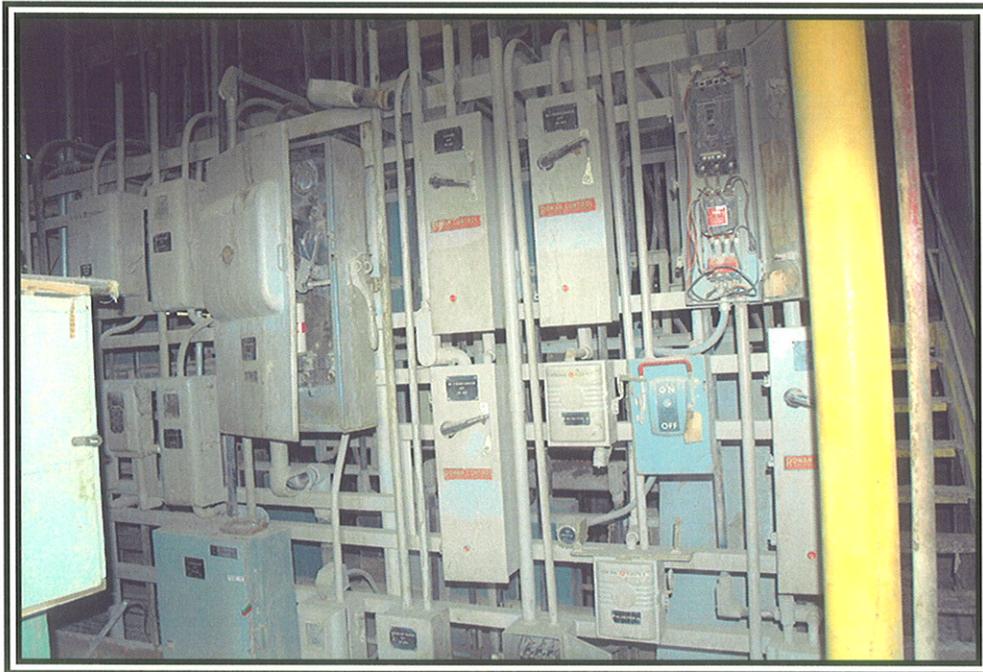

Part of the processing equipment.

Part of the processing equipment.

One of the exterior doors on the west elevation that accesses one of the larger rooms in the mill not fitted with equipment.

An example of the power supply used to run the equipment.

Another example of the electrical power needed for the equipment.
