## Select Hourly Visitor Numbers and Trail Characteristics

This tool was produced in response to public interest in finding a variety of experiences on trails during the summer and fall of 2020. The tool consolidates information already publicly available into one place and visualizes past use patterns. While the tool can help visitors be more likely to find the experience they seek it is important to note that actual daily and hourly visitation change based on temperature, cloud cover, season, etc. Data is specific to the summer and fall season and intended to be useful only through the fall of 2020. For more current and detailed information, please consider using these online resources:
